EDUCATION

SRM University

Bachelor's Degree in Computer Science

- 8.56 CGPA

Aug. 2021 – Present

Chennai, India

TECHNICAL SKILLS

Languages: Python, C, C++, R

Frameworks & Database: Tailwind, React, Firebase, Supabase, Mysql, MongoDB

Libraries: TensorFlow, PyTorch, Keras, Scikit-Learn, Pandas, NumPy, Langchain

Developer Tools: Git, Postman, Vercel

PROFESSIONAL EXPERIENCE

Research Intern | MedTech Innovations Lab

May 2024 – Aug. 2024

- Developed a custom CNN-LSTM model for classifying Diabetic Foot Ulcer and Ischemia, achieving a 35% accuracy improvement using Elephant Herding Optimization, with 88% accuracy for ischemia and 87% for tissue damage.
- Benchmarked pretrained models like DenseNet, ResNet, and MobileNetV2 against the custom architecture, applying advanced optimization techniques to enhance performance and reduce overfitting.

AI/ML Intern | Innosphere Ventures

Nov. 2023 – Apr. 2024

- Developed an ADHD treatment platform using a Transformer-based BiLSTM-Attention model with LLMs, achieving 89% accuracy in symptom detection and improved engagement.
- Built a predictive pipeline with a Stacked Ensemble of CatBoost, LightGBM, and Transformer embeddings, achieving 92% accuracy in early symptom detection.

PROJECTS

Mentoo | Typescript, Supabase

Ongoing

- Designed and developed a platform aimed at empowering men by offering a secure and supportive space for sharing personal experiences and challenges.
- Focused on fostering open dialogue, promoting mental health awareness, and addressing societal stigmas around masculinity.

InsightX | Generative AI

Ongoing

- Developed a Generative AI-powered web search platform using React and FastAPI, to provide real-time updates and validated sources to bridge knowledge gaps in LLMs.

Sonar Shift | Sklearn, Pandas, Numpy

- Developed a logistic regression-based model for classifying underwater objects as rocks or mines using sonar signals.
- Optimized signal processing and feature extraction to improve accuracy for underwater navigation and exploration.

Detection Systems | Python, YOLO, cv2, cvzone

- Developed a real-time object detection system using YOLO to accurately identify and localize objects in images and video streams.
- Optimized model performance for high-speed inference, enabling real-time applications in various environments.

CERTIFICATIONS

- NPTEL Data Analytics with Python
- Oracle Cloud Infrastructure 2024 Generative AI Certified Professional
- IBM Data Analyst Professional Certificate
- Google Data Analytic
